

Freeport develops and manufactures innovative AV products designed to maximize security in a multi-domain environment. We have extensive experience with classified and unclassified audio visual (AV) systems, video conferencing networks, and unified communications. Our TS/SCI cleared engineers produce hardware and software commercial off the shelf (COTS) products that facilitate turnkey systems that are secure, cost effective, and easy to maintain, upgrade and support. These systems include mobile solutions, conference rooms, training rooms, and large command and control centers.

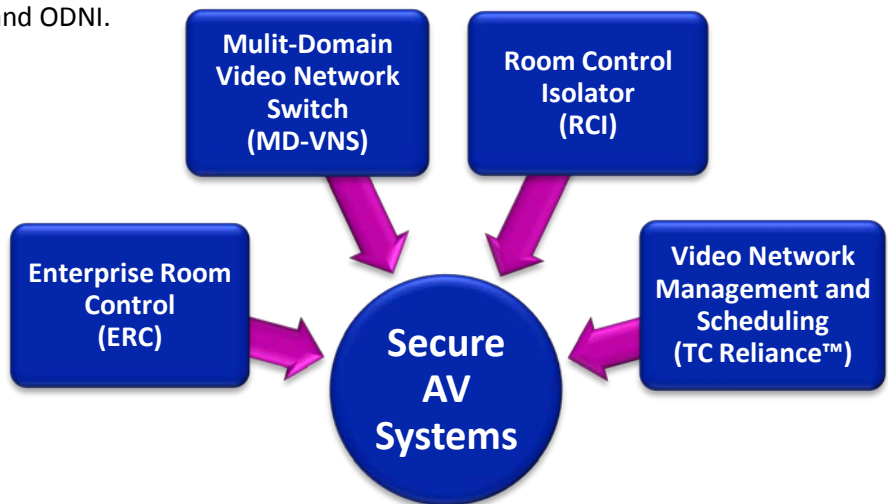

Freeport manufactures critical components providing the ability to deliver systems that are fully compliant with current Intel and DOD IA requirements:

- **Multi-Domain Video Network Switch (MD-VNS)** – Permits a single video CODEC to be utilized on up to nine IP networks of varying security classifications. Meets all current DISA requirements and future requests as detailed in the STIG dated January 2008. Approved for operation by DISA for NIPR and SIPR, by DIA for JWICS (Top Secret), NRO, NGA, Coalition Forces, and many other classified networks.
- **Room Control Isolator (RCI)** – Hardware component that prevents the AV room control system (manufacturer neutral) from inheriting the classification of any hardware connected to the system. The RCI addresses room control security issues without modification of existing system designs. Required by DIA for all AV room implementations with local control systems.
- **Enterprise Room Control (ERC)** – Object oriented room control software solution deployable across all AV room types. Fully configurable via a web interface with built in security related modeling; providing the ability to address specific functional requirements and enforce security policies without custom programming.
- **TC Reliance™** – Video network management and scheduling software system capable of being deployed across multiple networks of varying classifications. Currently in final networkness testing by the Army PEO EIS HQ..

Federal clients include:

Army PEO EIS HQ, Navy, Air Force, NGA, NRO, DIA, and ODNI.

Others provided on request.
